

Andrey Evtukh

Senior Angular / Frontend Developer

Bialystok, Poland (open to relocation) • andrey.evtukh@gmail.com • [LinkedIn](#) • [GitHub](#)

Senior Full-Stack Developer with 10+ years of experience, specializing in complex, frontend-heavy systems — Angular real-time streaming architectures, and large-scale platform modernization. Track record of owning modules end-to-end, leading legacy-to-modern migrations, and delivering production UI for platforms used by millions of end users.

EXPERIENCE

ASBIC Co, Poland

Oct 2025 – Present

Program Specialist / Full-Stack Developer

Modernization of an internal enterprise admin platform.

- Leading the migration of a legacy AngularJS application to a modern Angular architecture within an Nx monorepo environment.
- Designing and developing reusable Angular components and shared UI libraries styled with Tailwind CSS to support scalable and consistent front-end development.
- Building accessible, headless UI components with Spartan NG Brain and Tailwind CSS, following modern headless UI patterns.
- Implementing a design token system with OKLCH color space for perceptually uniform, accessible, and themeable UI styles.
- Implementing authentication with MSAL Angular using OIDC Authorization Code Flow with PKCE and Bearer token interceptors for secure API access.
- Contributing to a microfrontend architecture and working with a BFF layer built on Java Servlets and JSP, enabling optimized data delivery, server-side preprocessing, and legacy system interoperability.
- Collaborated with Product Owners and Backend engineers to reverse-engineer legacy system behavior, map out API integration contracts, and document architectural solutions.
- Troubleshoot deployed applications by inspecting system logs and diagnosing backend-frontend integration bottlenecks.
- Actively leveraging Claude AI throughout the development workflow — including code generation, architectural decision-making, refactoring, code review assistance, and documentation — to accelerate delivery and maintain high code quality.

Technologies: Angular 21 / AngularJS, TypeScript, SCSS, Tailwind CSS, OKLCH, Spartan NG Brain, MSAL Angular, OIDC (PKCE), AG Grid, Nx, NgRx, GraphQL, Spring Boot, Microfrontends

ITS-Partner

Nov 2014 – Oct 2025

Program Specialist / Full-Stack Developer — Poland, Sweden, Norway, USA, Kazakhstan, Belarus

Client: Verisure

Apr 2025 – Oct 2025

Internal admin platform for Verisure's installer / technician network (B2B tool, not the consumer-facing security product).

- Developed and maintained Angular applications using TypeScript and Ionic.
- Implemented and integrated GraphQL and REST APIs.
- Contributed to the BFF layer using Java / Spring Boot.
- Built accessible, headless UI components with Spartan NG Brain and Tailwind CSS, following modern headless UI patterns.
- Implemented authentication with MSAL Angular using OIDC Authorization Code Flow with PKCE and Bearer token interceptors for secure API access.
- Integrated rule-based decision logic using the gorules/zen-engine-wasm library to support dynamic business rules.
- Ensured high code reliability and maintainability by covering complex business logic with unit and integration tests using Jest and Angular TestBed.

Technologies: Angular 14–19, NgRx Signals / @ngrx/signals, TypeScript, Ionic, JavaScript, Java, Spring Boot 3.3, GraphQL, MSAL Angular, REST, HTML5, Tailwind CSS / SCSS, Spartan NG Brain, Jest, Angular TestBed

Client: Arlo Technologies (Arlo Professional)

Nov 2014 – Feb 2025

Progressed from Middle to Senior Developer over the engagement; served as technical lead and module owner. Large-scale platform for professional video monitoring and smart security devices, supporting real-time streaming and cloud-connected devices — reported at ~12.1M cumulative registered accounts and 42.7M+ shipped devices (Arlo Technologies, FY2025 results).

- Developed and maintained a single-page application using Angular SSR, AngularJS, and TypeScript.
- Cloud storage: experience integrating applications with cloud-based storage and backend services, including S3-compatible storage.
- Built responsive UI components with Angular Material, SCSS, and HTML5.

- Owned several key modules including media streaming, SIP communication, and real-time messaging systems, acting as module lead.
- Built the media/video streaming player and implemented SIP-based streaming functionality.
- Optimized application load time through Angular SSR, code-splitting, lazy loading, and bundle size reduction.
- Integrated backend services via REST and Apollo GraphQL APIs.
- Implemented real-time communication using MQTT, SSE, and WebSockets.
- Contributed to backend services with Node.js / Express and MongoDB / Mongoose.
- Participated in architecture improvements, code reviews, and technical solution design.
- Investigated and resolved production issues by inspecting application logs, tracing network activity, and debugging integration points; improved CI/automation processes.

Technologies: Angular 17 / SSR, AngularJS, TypeScript, RxJS, Angular Material, HTML5, SCSS, Angular i18n (\$localize), Jasmine/Karma, JWT/OAuth2/SSO, REST API, Apollo GraphQL, MQTT, SSE, WebSockets, WebRTC, DASH, HLS, SIP.js, Flowplayer, Astro, Bootstrap, Underscore.js, jQuery

Institute of Information Technologies, Belarus

Aug 2001 – Nov 2014

Front-End Developer / Technical Specialist

Front-end development and support of the corporate web site; documentation and design for fiber-optic measurement equipment.

- Developed and maintained the corporate website and internal web tools.
- Created technical documentation and design specifications for fiber-optic measurement equipment (GOST, ISO).
- Developed Flash-based promotional applications for the company's products.
- Contributed to hardware-related tasks including device interface development and PCB tracing.

PROJECTS

Hotel Booking Service

pet / diploma project, Skillbox

- Full-stack booking platform: Spring Boot 4 backend and Angular 22 frontend.
- PostgreSQL for core data, MongoDB + Apache Kafka for an asynchronous statistics pipeline.
- Role-based access control (Spring Security), Swagger / OpenAPI-documented REST API, CSV and PDF export, Docker Compose deployment.

GitHub: github.com/AndreyEvtukh/skillbox-java-spring

CERTIFICATIONS

Java Spring Framework — Skillbox, via Lerna.by · Sep 2026

EDUCATION

Belarusian State University of Informatics and Radioelectronics

Sep 1996 – Jun 2001

Faculty of Computer Design — Engineer's Diploma (Bachelor's Degree)

SKILLS

Frontend: Angular 22 / SSR, AngularJS, Angular Material, Ag-Grid Enterprise, RxJS, TypeScript, JavaScript, HTML5, SCSS, Tailwind CSS, Spartan NG Brain, Lodash, jQuery

Backend & APIs: Java / Spring Boot, Node.js, Express, REST API, GraphQL, PostgreSQL

Real-time communication: WebSockets, MQTT, SSE

Media streaming: WebRTC, DASH, HLS, SIP.js, Flowplayer

Cloud & DevOps: CI/CD pipelines, log inspection & debugging, cloud storage integration (S3-compatible)

Tools & platforms: Nx, Docker, LaunchDarkly, Amplitude Analytics

Graphics: Canvas, SVG, Adobe Photoshop, Adobe Illustrator

Programming languages: JavaScript, TypeScript, Java, ActionScript 3

Spoken languages: Russian (native), English (working proficiency — daily communication with international teams in the USA, Sweden, and Norway)

Other: Business trips to the United States (2018, 2024)
